TRANSCFERRING TO WOOD OR FABRIC WITH FREEZER PAPER

By Janice Clark
What you will need:
Freezer paper
Cardstock
Glue stick or tape runner
Scotch tape
Wood
Spoon

Cut a piece of freezer paper 8 ½ by 11. Attach it to the card stock by putting glue on the cardstock and on the edges primarily. Lay the freezer paper on the cardstock with the shiny side UP. I taped down the top edge that goes through the computer.

I used Avery.com for a template for a transfer. It is # 3275. Once you have what you like, go to print. Because this is a template for a transfer, it will flip your writing and picture. I did make adjustments to my printer to be sure that it was set on 'best' for the quality of printing. I put the paper face side down (freezer paper) and printed on that.

When it is done, do not touch the ink because it is on the surface of the paper. I liked using the card stock because it made it firm so that I could cut
around the printing. I mainly wanted it cut so I would know where to lay it on the wood. I laid it down and taped it to the wood so it wouldn't slide around. I then took a spoon and went over the paper many times, hoping to get all parts of the printing. I then, carefully, lifted the paper and there was my printing.

I put a ribbon on with scotch tape to hang it from. There are endless possibilities. For making transfers for cloth, check on Pinterest for the details so you can use the freezer paper.
